LearnHub — HTML Beginner Notes

Module 1 · HTML Foundations

1. What is HTML?

HTML stands for HyperText Markup Language. It describes the structure and meaning of content on a web page. A browser reads HTML and displays headings, paragraphs, links, images, forms and other elements.

2. HTML, CSS and JavaScript

HTML creates the page structure. **CSS** controls appearance, colours, spacing and layout. **JavaScript** adds behaviour and interactivity.

3. How a website works

You write HTML, CSS and JavaScript files. The browser reads those files, builds the page and displays the result on your screen.

4. Practice task

Create an index.html file in VS Code. Add the HTML document structure, a page title, one heading, two paragraphs and one link. Save the file and open it in your browser.
